Leveraging AI

Goal

To help developers, designers, and PMs overcome their skepticism about AI tools and embrace a fundamentally better way of prototyping that puts human creativity first while automating the grunt work.

Leveraging AI

Prototyping

Framework

1. Capture
2. Research
3. Build
4. Evaluate

Create working prototypes in less time.

Leveraging AI

Benefits

Immediate

Speed, Quality, Collaboration, Creativity

Long-term

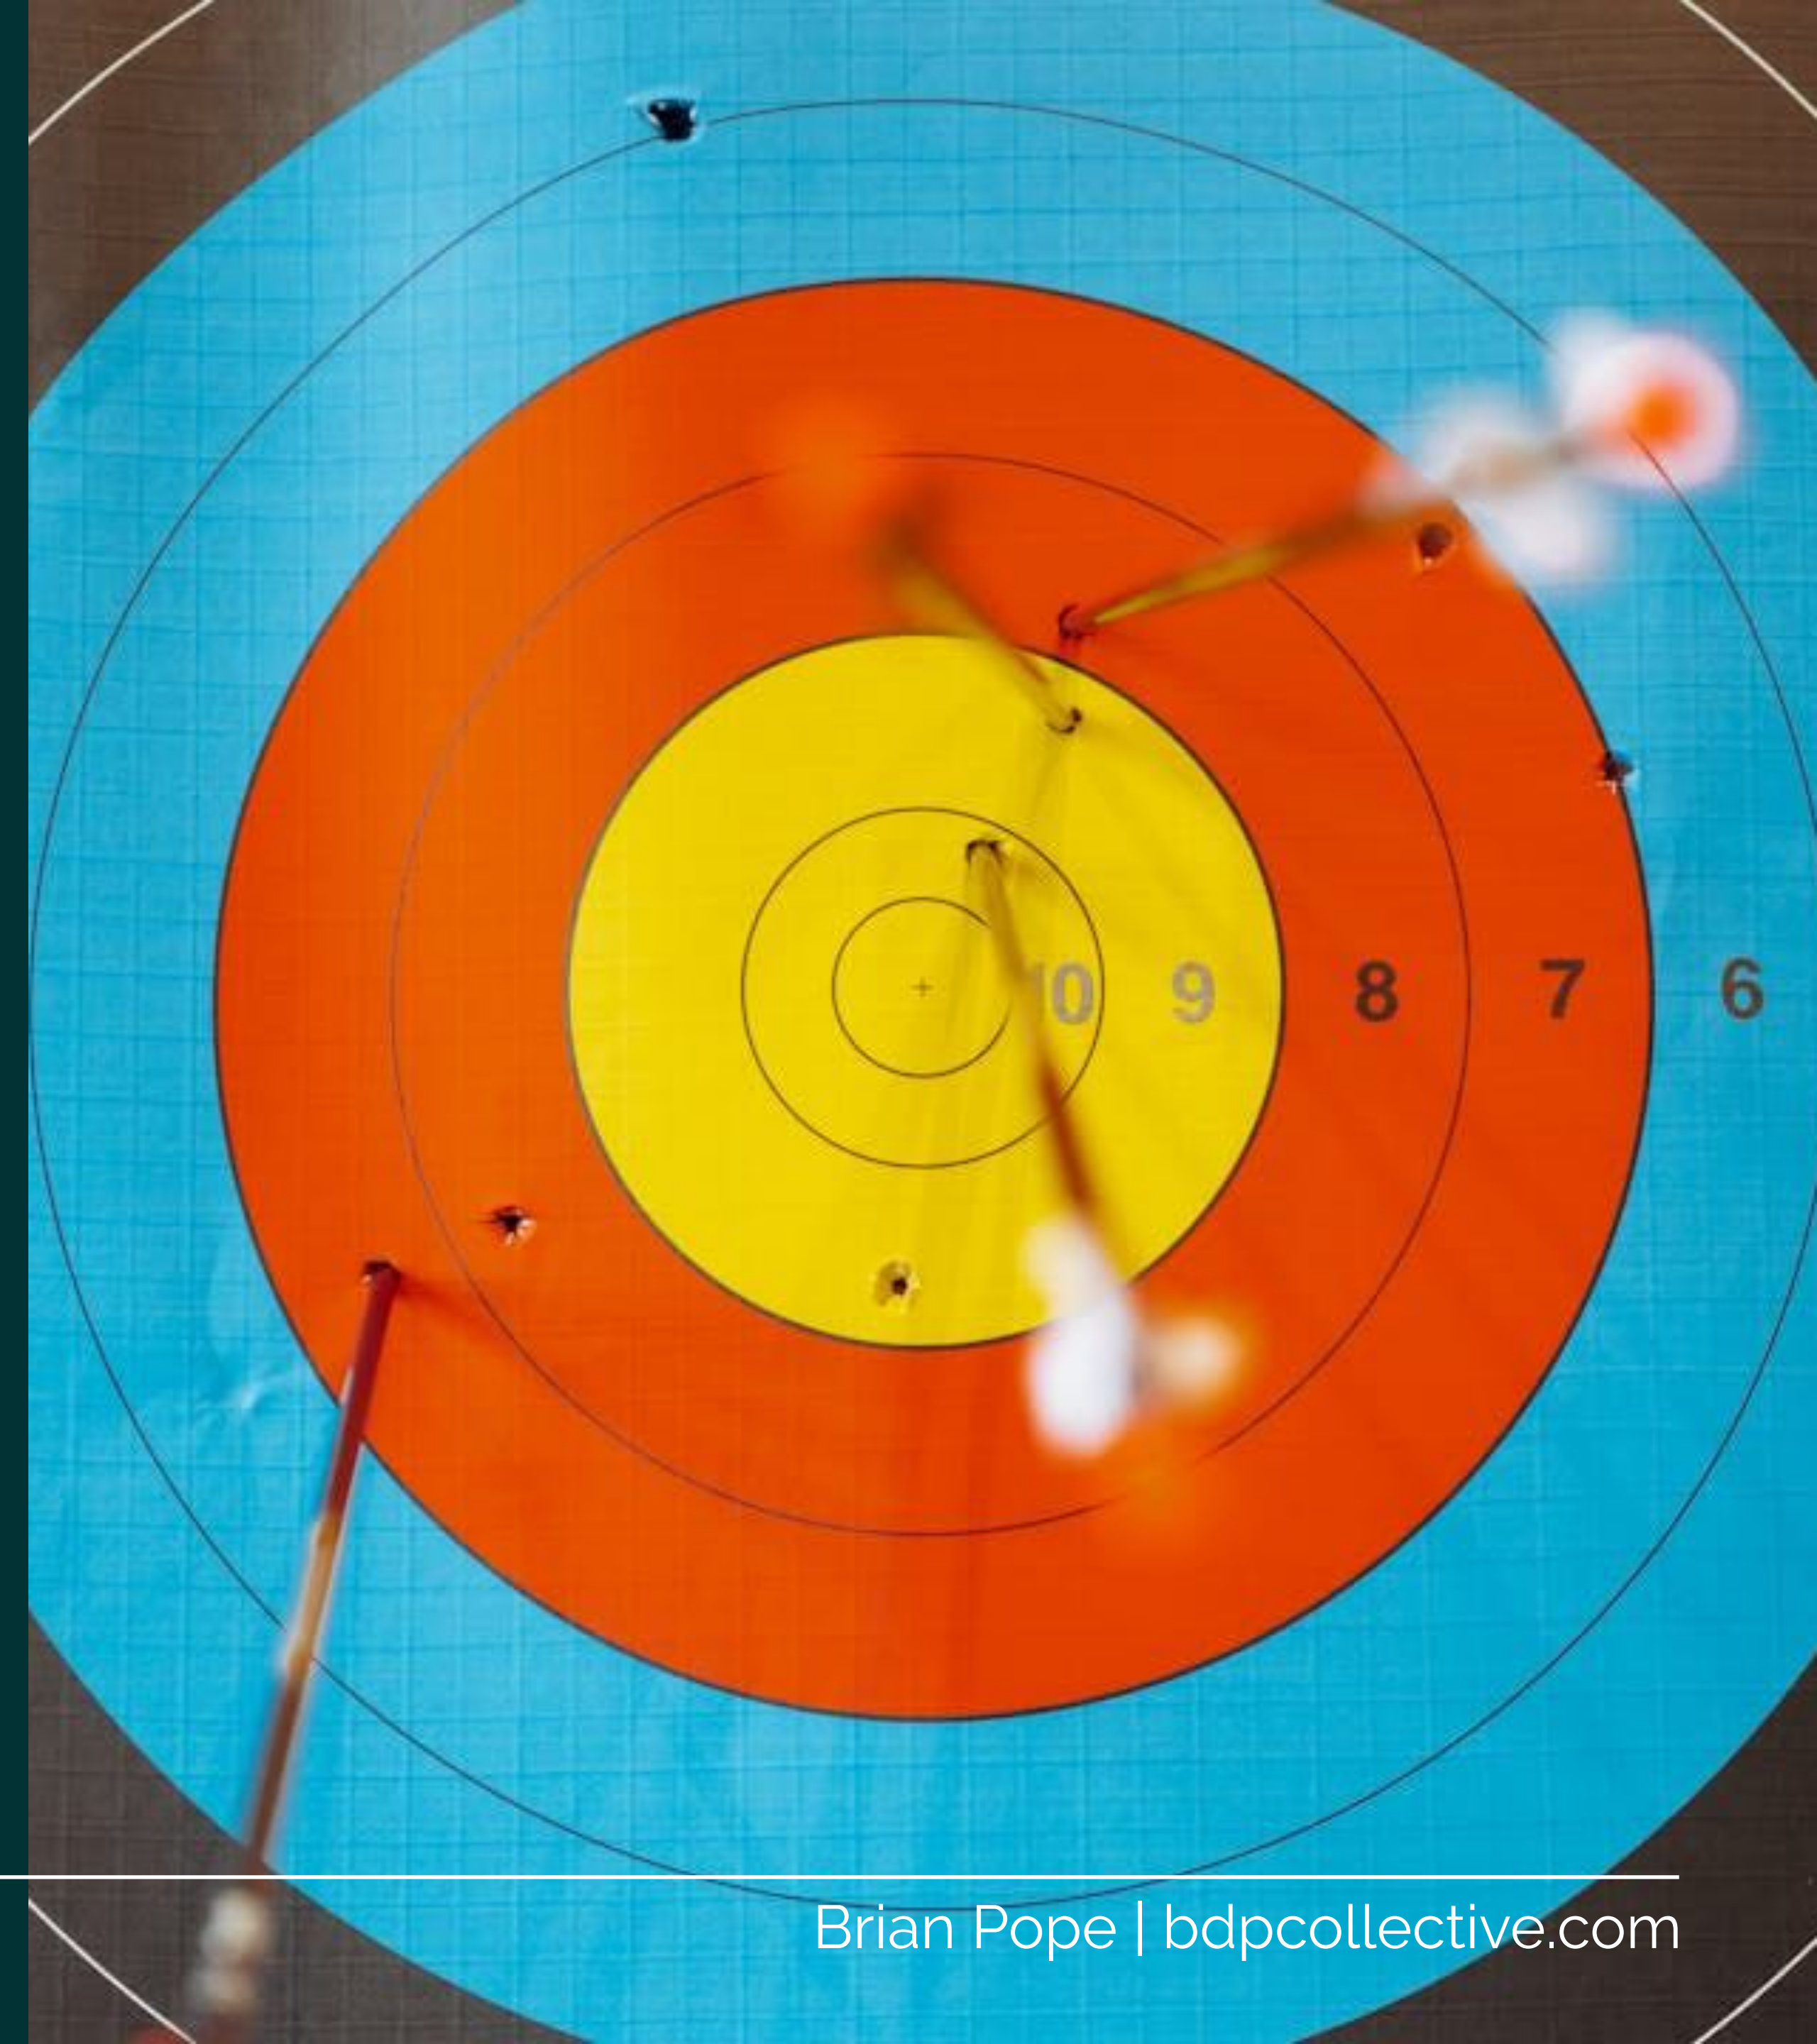

Career Growth, Team Efficiency, Client Relationships

Personal

Less frustration, Creativity, Learning

Business

Faster time to market, Cost savings, Client Satisfaction

Who

Brian Pope

Title:

Principal UX Design Consultant

Company:

DevObsessed

Location:

Omaha, Nebraska

The Project

Quick Deadline

					Independence Day	
6	7	8	9	10	11	12
	Timesheet App					
13	14	15	16	17	18	19
Timesheet App						
20	21	22	23	24	25	26
Timesheet App						
27	28	29	30	31	Aug 1	2
Timesheet App						

The Stakes

Build a Working Timesheet Application Prototype

- Not wireframes
- Not mockups
- Something clients can test

Old vs. New

Software Design Process

Traditional

1. Discovery
2. Workflows
3. Information architecture
4. Wireframes
5. High-Fidelity
6. Iterations

New (Work in progress)

1. Capture
2. Research
3. Build
4. Evaluate

How good could it be?

The Skeptic's Journey

I was a skeptic

“AI is a fad. We’ve seen this before, right?”

~Me 3 months ago

Traditional Prototyping

- Designer is a sprint ahead
- Developer gives input on mocks
- Product manager mediates client needs between designer and dev
- Designer updates mocks
- Rinse and repeat

The Real Cost

Time, energy & Money

- Multiple revisions
- Time spent debating details that may or may not matter
- Teams spending extra time reviewing and critiquing

My “Aha” moment

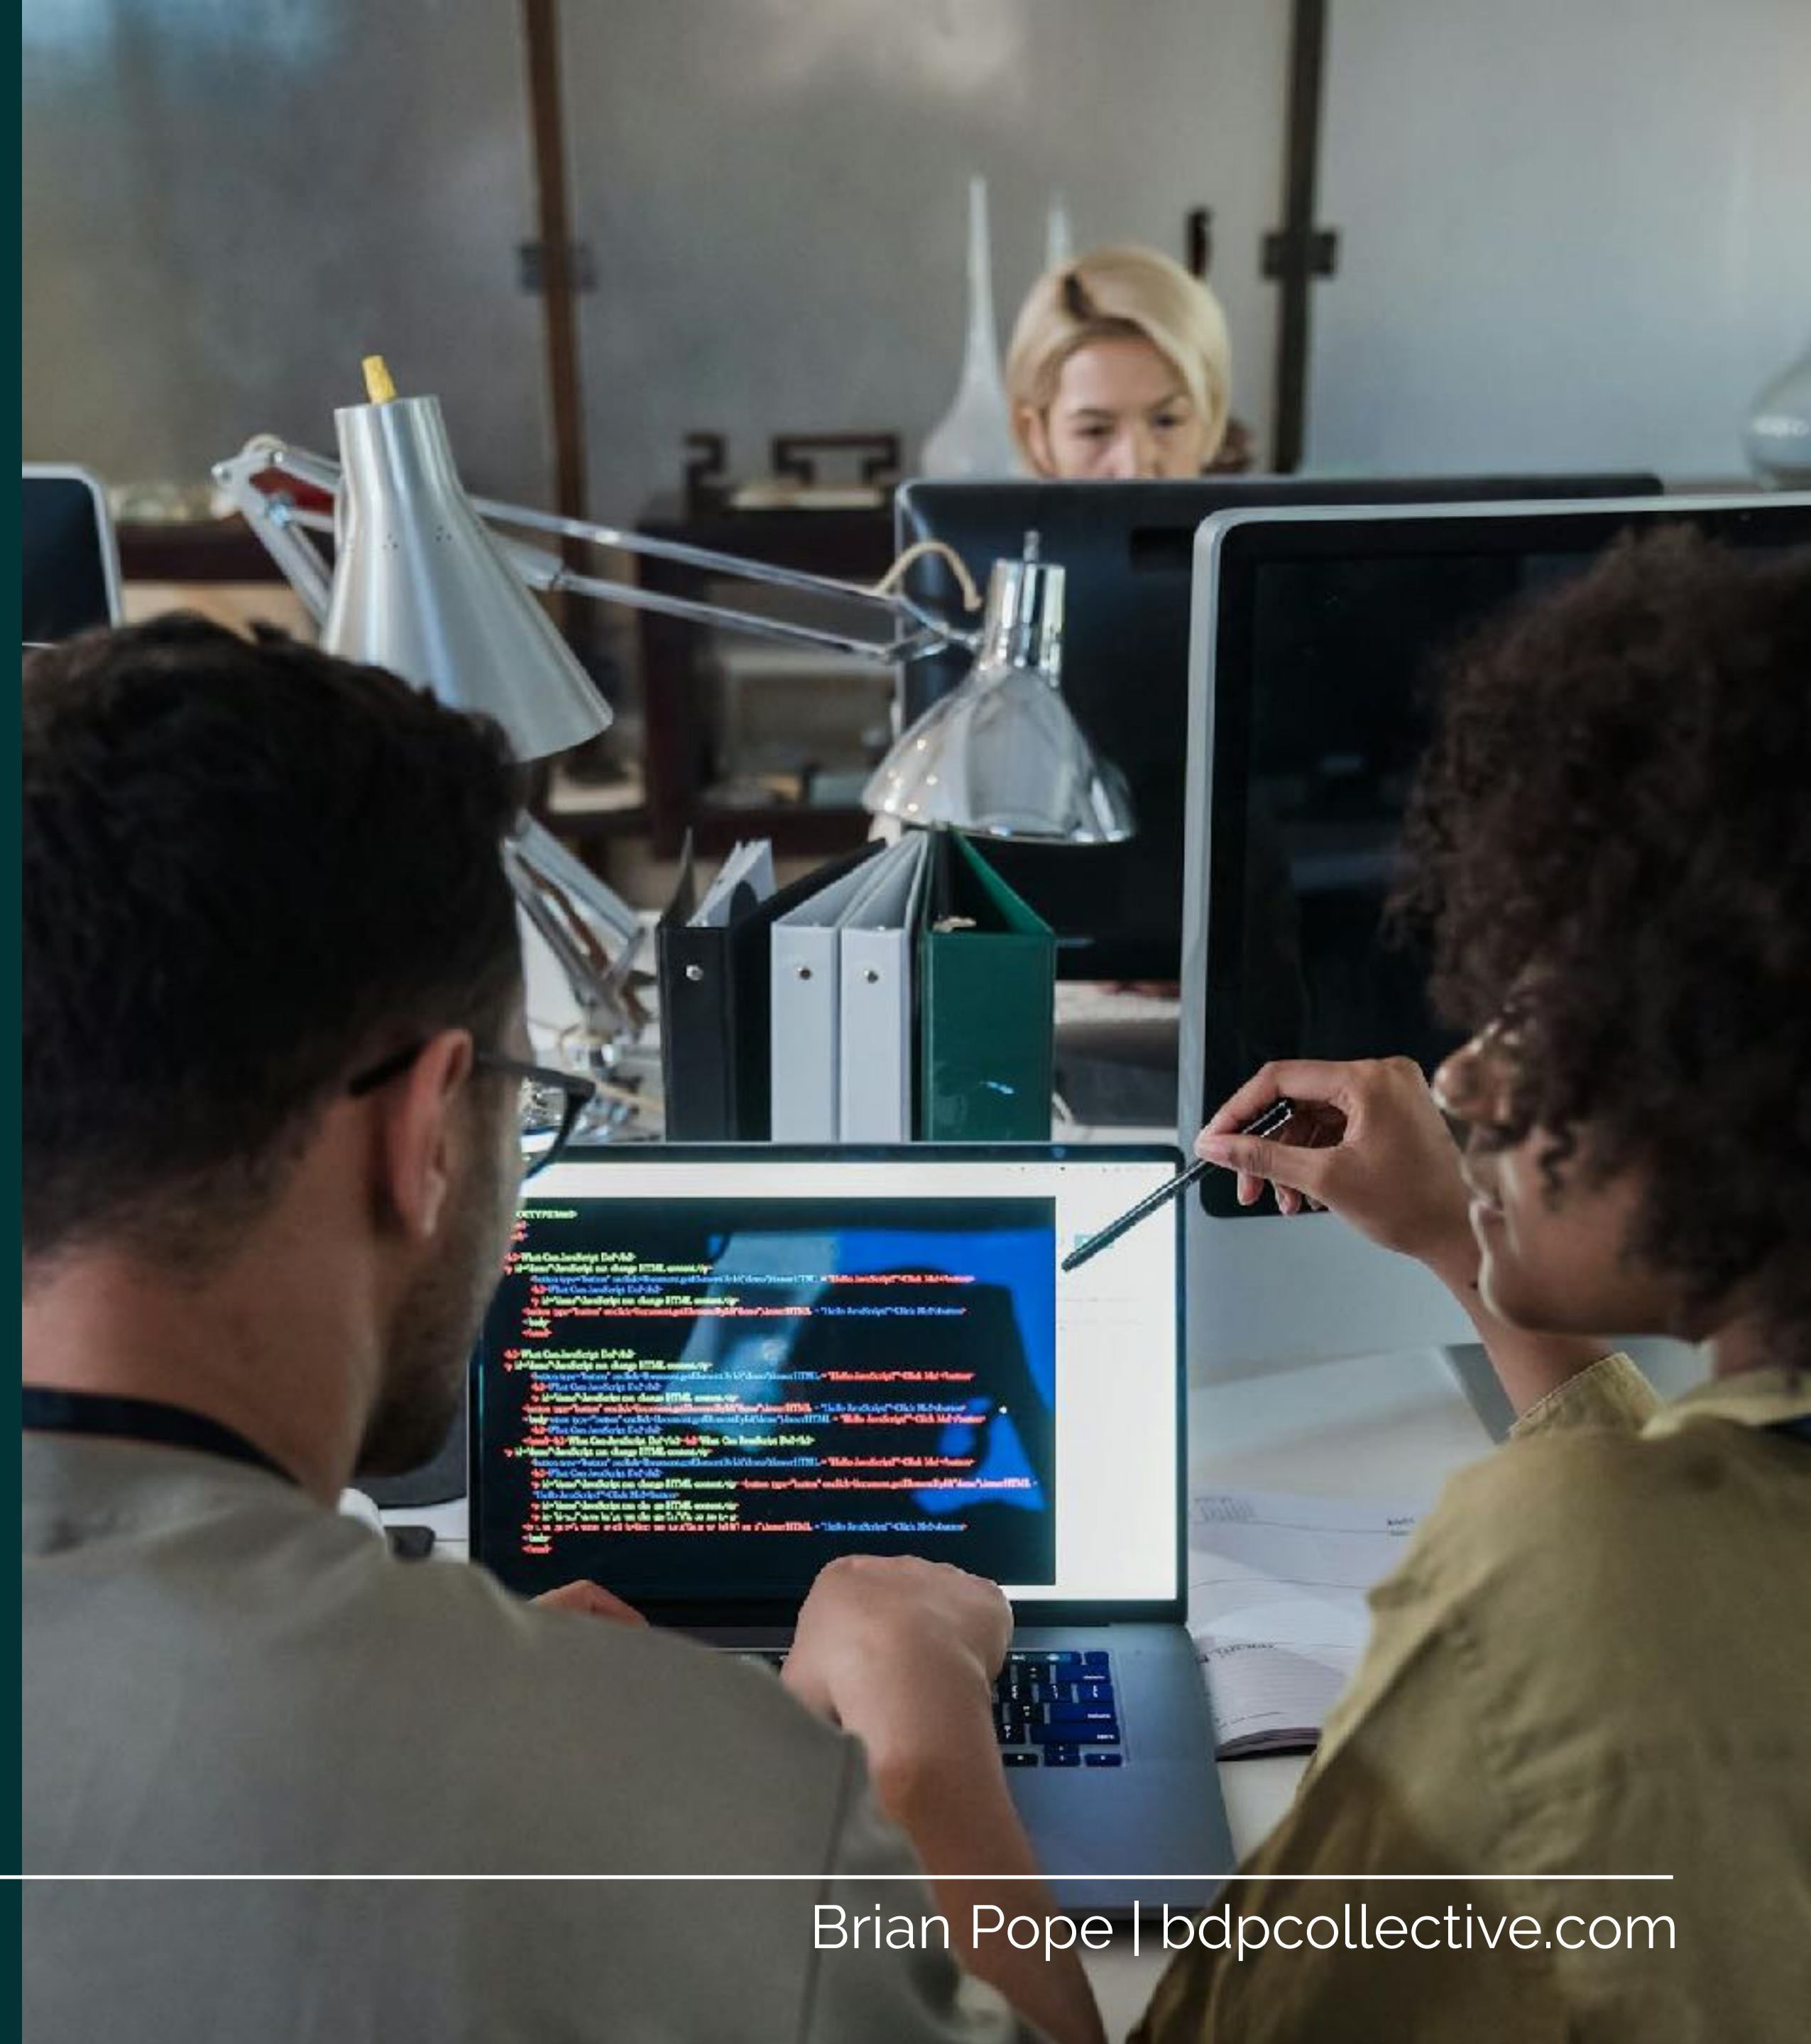

“Traditional prototyping wasn’t just slow. . . its fundamentally broken.”

2. The Breakthrough

AI Prototyping

- Recording and collecting all conversations
- Team makes decisions based on knowledge and project context
- We give AI context and use our expertise, build a prototype
- Refine prototype with team and test with users

The Catalyst

Context is everything

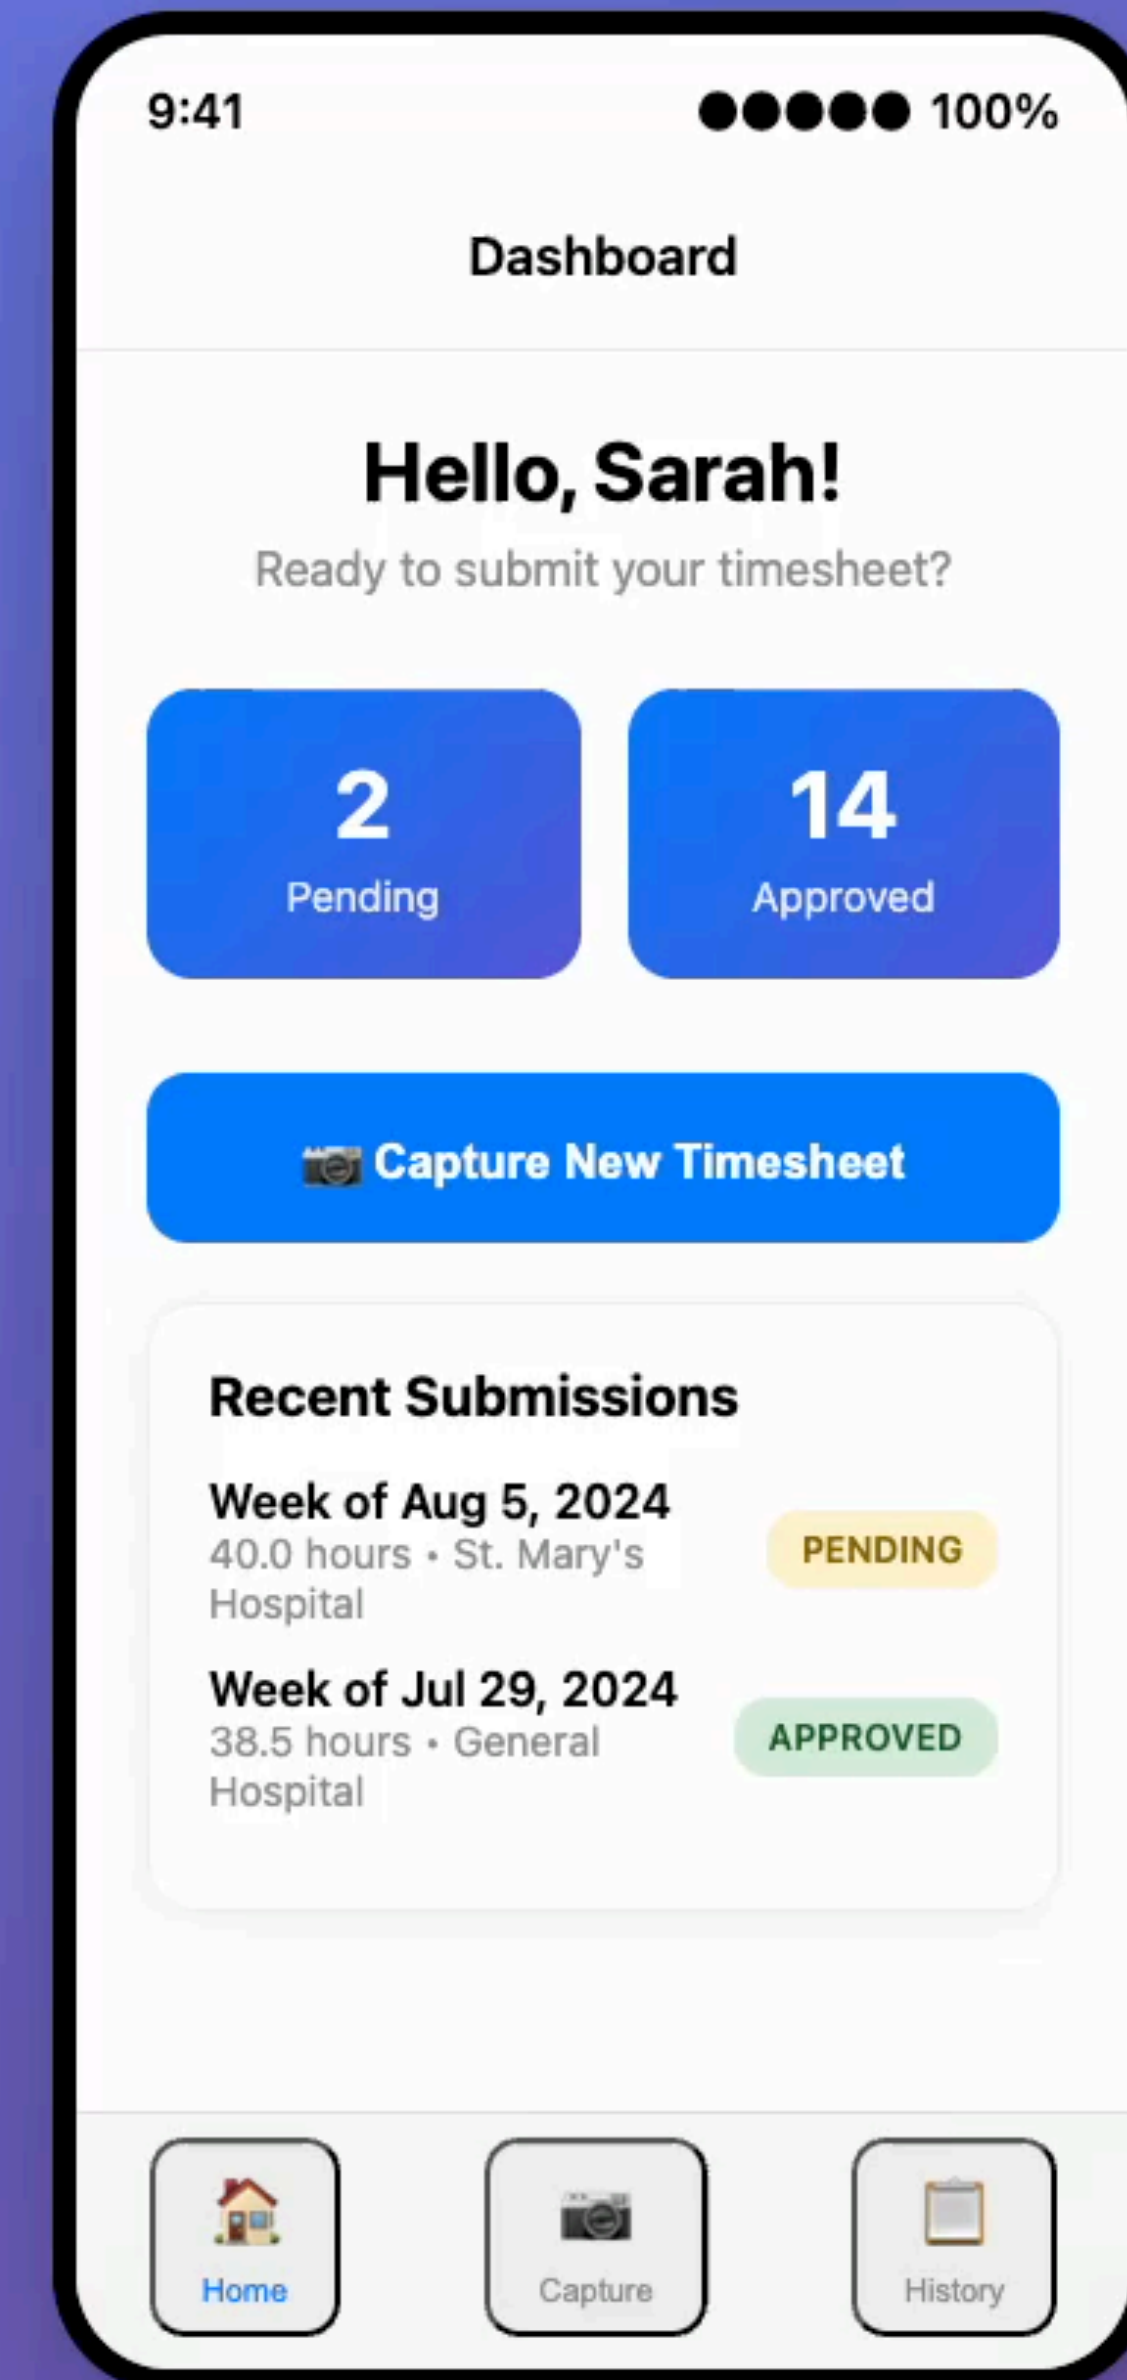

- Before/ After Comparison
 - One-shot “Help me build a timesheet app”
 - “Here is the users background, applications they are used to using, type of computer user they are, etc.”
- Key Insight: Context changes everything- **Your AI needs good context to make design decisions**

The Timesheet Surprise

AI created an initial prototype that was different than anything I would have come up with.

Key realization : **AI was solving and design problems, not just regurgitating**

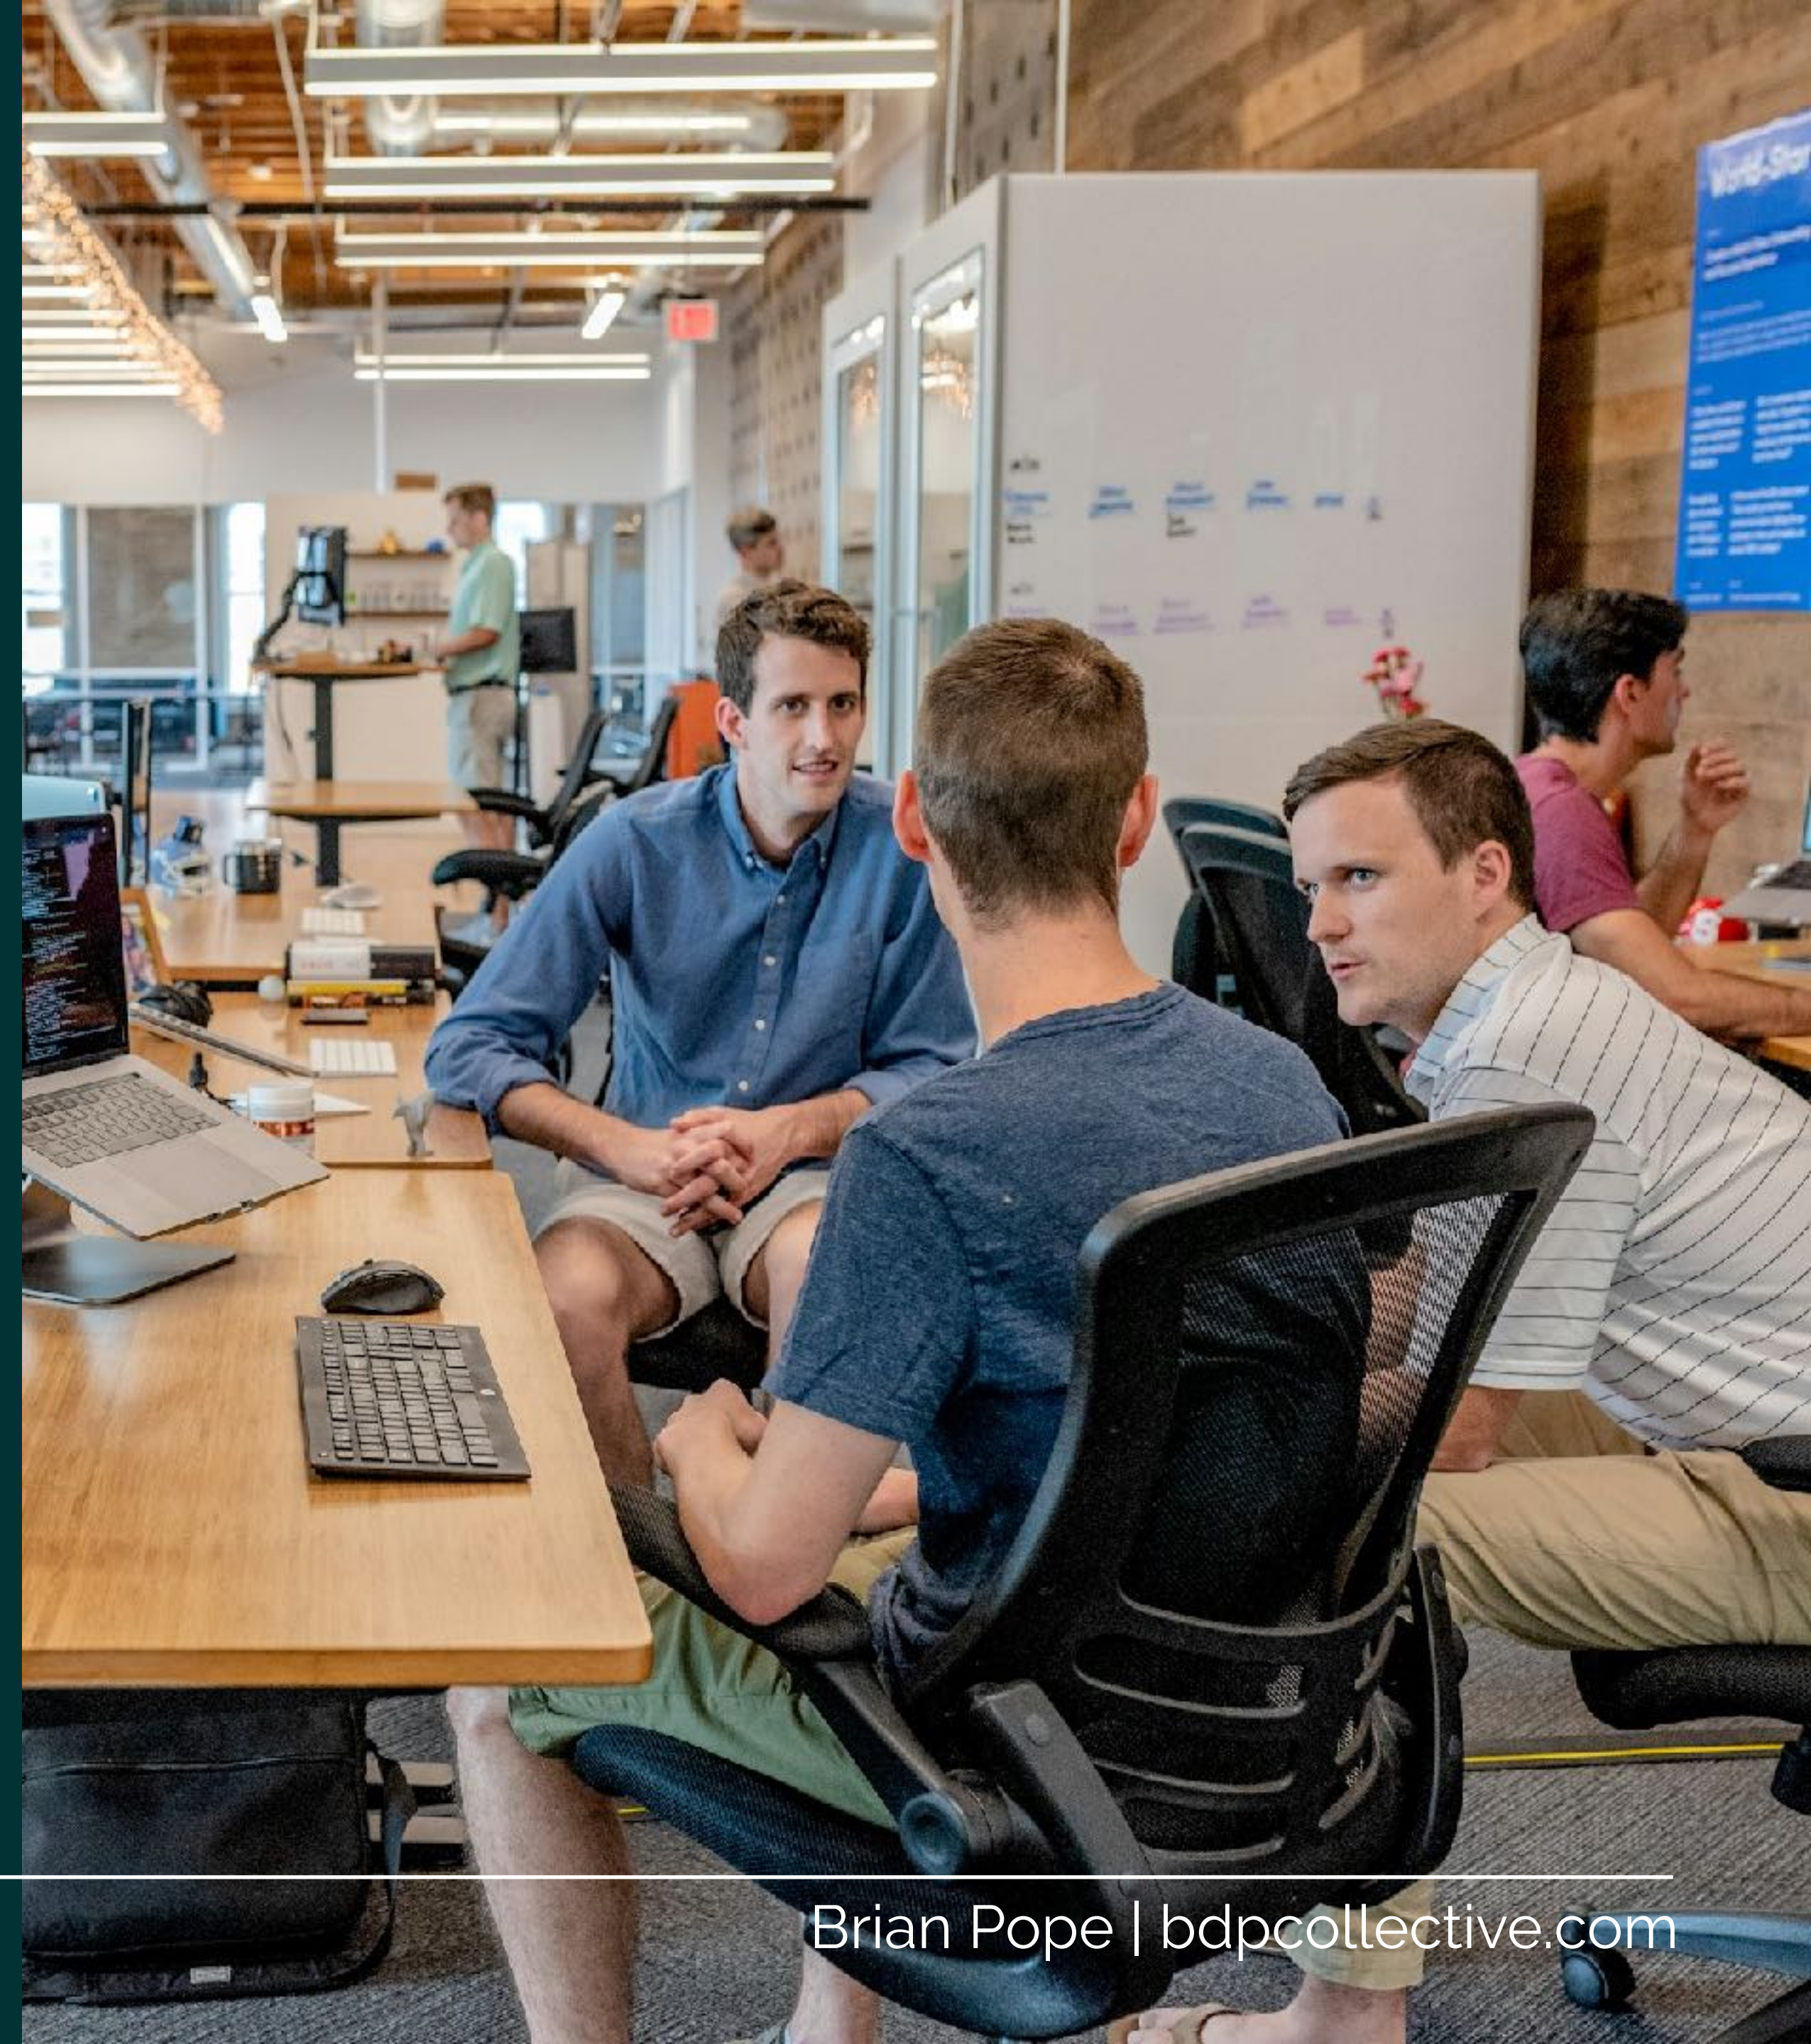

New Paradigm

Client Context + AI =

Solutions that encapsulate in more detail

Meeting transcripts + App Workflows +
Timesheets + Styles =

Tailored prototypes

Real Time Collaboration

“We come to a consensus faster. Building prototypes, live, in meetings, with everyone's expertise applied immediately leads to better ideas overall.”

3. The New Process

Akutime - AI-Powered Nurse Timesheet Management App

1. Executive Summary

Product Name: Akutime

Version: 1.0

Date: August 2025

Team: Healthcare Technology Division

Akutime is a mobile-first timesheet management application designed specifically for healthcare workers, with initial focus on nursing staff. The app leverages AI-powered photo capture technology to digitize paper timesheets and streamlines the approval workflow between nurses and their supervisors.

Key Value Proposition: Transform tedious manual timesheet entry into a seamless, AI-assisted mobile experience that reduces administrative burden while maintaining compliance and accuracy.

2. Product Overview

2.1 Problem Statement

Healthcare workers, particularly nurses, face significant administrative overhead managing paper-based timesheets. Current pain points include:

- Time-consuming manual data entry from paper forms
- Risk of transcription errors
- Delayed approval workflows
- Poor visibility into timesheet status
- Difficulty tracking historical records
- Manual signature collection processes

2.2 Solution

Set project instructions Optional

No knowledge added yet. Add PDFs, documents, or other text to the project knowledge base that Claude will reference in every project conversation.

Created by You Private

I would like to build wireframes for a mobile app using the akutime_prd.md

Design should look like gray border wireframe boxes to show functionality without any style

I will only need this in HTML and CSS

Ask me any questions that would help make clarify any unknowns.

AG The bottom menu is getting cut off at the bottom. Can you fix the menu to fit with this size of screen?

Akutime Mobile App Wireframes

Interactive artifact · Version 3

Perfect! I've fixed the bottom navigation menu by:

1. **Adding flexbox layout** to the phone frame (`display: flex; flex-direction: column`)
2. **Making the content area flexible** (`flex: 1`) so it takes up available space
3. **Removing the fixed height** from the content area

Now the bottom navigation menu will always be visible at the bottom of each screen, and the content area will automatically adjust to fit the remaining space. The menu should no longer be cut off regardless of the content length.

I would like to build a High-Fidelity Prototype for a mobile app using the akutime_prd.md and the wireframes in the arifact above. Please make this into a clickable prototype without a login

Please make this WCAG Compliant

Design should look like iOS 18 to show interaction and styling.

AG Make this as easy as possible for users by using Nielsen Normans 10 Usability Heuristics <https://www.nngroup.com/articles/ten-usability-heuristics/>

I will only need this in HTML and CSS

Ask me any questions that would help make clarify any unknowns.

Editing this message will create a new conversation branch. You can switch between branches using the arrow navigation buttons.
